                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to an isolated mucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention : useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention assequences (ABLO1840-ABL16175) and the encoded proteins (ABB7737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 234
                                   The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA ABB2072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 GluLysArgLeuLeuHisAspLeuLeuAspProTyrAsnThrLeuGluArgProValLeu

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               531
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           474
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          551
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           60
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      534
                                                                                                                                The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABBS7737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
detection reagent for detecting 1000 or more for elucidating cell signaling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AsnLeuArgTrpAsnThrSerAspTyrGlyGlyValLysAspLeuArgIleProProHis

2 cDNA clones (AAM129196 and AAM59197) respectively code for the alphal subunit (AAM12368) and alpha2 subunit (AAM12365) of chick neuronal alphabungarctoxin binding protein (ABBP). They were isolated from an 18-day embryo chick brain cDNA library using a probe (see also AAT59198) based on the N-terminal amino acid sequence of chicken brain ABBP. The probe isolated partial clone pCh29-1, which encoded the N-terminal portion of alpha1. A subclone, pCh29-3 (ATC 40641), was used to rescreen the library, yielding clone pCh31-1 (ATCC 40640), which encoded the entire alpha2 sequence. A probe based on the C-terminal region of pCh31-1 was used obtain clone pCh34-1 (ATCC 40639), encoding the C-terminal portion of alpha1. The cDNA clones can be used as probes to identify further ABBP subunits, and in the recombinant prodn. of ABBP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                205
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      265
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               431

2 CDNA clones (AAT59196 and AAT59197) respectively code for the alphal subunit (AAW12368) and alpha2 subunit (AAW12369) of chick neuronal alphabungarotoxin binding protein (ABBP). They were isolated from an 18-day embryo chick brain cDNA library using a probe (see also AAT59198) based on the N-terminal amino acid sequence of chicken brain ABBP. The probe alphal. A subclone, pCh29-1, which encoded the N-terminal portion of alphal. A subclone, pCh39-1 (ATCC 40641), was used to rescreen the library, yielding clone pCh31-1 (ATCC 40640), which encoded the entire alpha2 sequence. A probe based on the C-terminal region of pCh31-1 was used obtain clone pCh34-1 (ATCC 40639), encoding the C-terminal portion of alpha1. The cDNA clones can be used as probes to identify further ABBP

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   --ValCysLeuAlaGlyTyrHisGluLys 313
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              SerAspProLeuGlnLeuSerPheGlyLeuThrLeuMetGlnIleIleAspValAspGlu 353
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence is the coding sequence for wild-type human alpha7 nicotinic acetylcholine gated ion channel. The human alpha7 ion channel was used in the construction of an alpha7/5-hydroxytryptamine (5-HT3) chimeric ligand gated ion channel (see AAC90382 and AABS0014). The alpha7/5-HT3 chimeric ion channel can be expressed by recombinant cells in the present invention, resulting in preferential calcium ion conductance by the cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ArgleuLeuHisAspleuLeuAspProTyrAsnThrLeuGluArgProValLeuAsnGlu

The cells expressing the alpha and/or beta NAChR subunits may be used in a method of screening compounds to identify any which modulate the activity of human neuronal NAChR. Subunit specific antibodies may be used to monitor the distribution and expression density

                         single receptor subunits or specific receptor subunit combinations with variety of potential agonists or antagonists provides information with respect to the function and activity of the individual subunits and should lead to the identification and design of compounds that are capable of very specific interaction with one or more receptor subtypes. The resulting drugs should exhibit fewer unwanted side effects than drug
                                                                                                                                                                                                                subtypes

                                                                                                                                                                                                                                                                                                 A DNA sequence (AAT48239) codes for the alpha-7 subunit (AAW09025) of the human neuronal nicotinic acetylcholine receptor (TAChR). Host cells, est mammalian cells or amphibian oocytee, carrying alpha-7 nucleic acids, opt. in combination with other alpha and/or beta subunit nucleic acids (see also AAT4832-38, AAT48240-41), express recombinant nAChR subunits useful for identifying cpds. that modulate the activity of human nAChRs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ---ValCysLeuAlaGlyTyrHisGluLys

The invention relates to a method for identifying compounds that are antagonists or agonists of human neuronal nicotinic acetylcholine receptors (NAChRs), by contacting recombinant cells with a test compound and measuring ion flux, the electrophysiological response of the cells or binding of the test compound to the nNAChR. The recombinant cells are produced by transfection with a nucleic acid encoding at least one human NNAChR (alpha or beta) subunit, such that the cells express an nNAChR comprising one human subunit encoded by the transfected nucleic acid. This sequence represents cDNA encoding the alpha 7 subunit of the human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ValCysLeuAlaGlyTyrHisGluLys 313
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Identifying antagonists or agonists of human neuronal nicotinic acetylcholine receptors, by contacting recombinant cells with test compound, and measuring ion flux of cells or binding of compound to NNACHR.
                                                                                                                                                                                                                                                                                                Human neuronal nicotinic acetylcholine receptor alpha 7 subunit
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          530 G; 423 T; 0 U; 1 Other;

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

nicotinic acetylcholine receptor alpha-2 chain precursor - fruit fly (Drosophila melanog C; Species: Drosophila melanogaster C; Species: Drosophila melanogaster C; Date: 30-Sep-1991 #sequence revision 30-Sep-1991 #text_change 21-Jun-2002 C; Accession: S11679; S10306; $11084 R; Sawruk, E.; Schloss, P.; Betz, H.; Schmitt, B. BMBO J. 9, 2671-2677, 1990 A; Title: Heterogeneity of Drosophila nicotinic acetylcholine receptors: SAD, a novel dev A; Reference number: S11679; MUID:90360975; PMID:1697262 A; Accession: S11679.
submitted to the EMBL Data Library, June 1990
A; Description: Nucleotide sequence of the mature human nicotinic acetylcholine receptor A; Reference number: $21338
A; Accession: $21338
A; Accession: $21338
A; Status: preliminary
A; Molecule type: mRNA
A; Residues: 30-503 <ANA
A; Residues: 30-503 <ANA

membrane.

SUBUNIT: Forms a homo-oligomeric channel blocked by alphabungarotoxin. The structure is probably pentameric (By

This SWISS-PROT entry is copyright. It is produced through a collaboration similarity).
SUBCELUGAR LOCATION: Integral membrane protein.
DEVELOPMENTAL STAGE: Alpha-7 transcripts transiently accumulate in the developing optic tectum between E5 and E16.
SIMILARITY: Belongs to the ligand-gated ionic channel family.

-!- FUNCTION: After binding acetylcholine, the AChR responds by an extensive change in conformation that affects all subunits and leads to opening of an ion-conducting channel across the plasma
                                                                          01-FEB-1994 (Rel. 28, Last sequence update)
28-FEB-2003 (Rel. 41, Last annotation update)
Neuronal acetylcholine receptor protein, alpha-7 chain precursor.

- SUBCELLULAR LOCATION: Integral membrane protein.
- SIMILARITY: Belongs to the ligand-gated ionic channel family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ASSOCIATED WITH RECEPTOR ACTIVATION (BY SIMILARITY).

"Annotation of the Drosophila melanogaster euchromatic genome: systematic review.";

by an and Genome Biol. 3:RESEARCH0083.1-RESEARCH0083.22(2002)
-!- FUNCTION: After binding acetylcholine, the AChR responds by extensive change in conformation that affects all subunits leads to opening of an ion-conducting channel across the pl

SUBCELLULAR LOCATION: Integral membrane protein.

-!- TISSUE SPECIFICITY: CNS in embryos. -!- DEVELOPMENTAL STAGE: Late embryonic, late pupal and second instar -!- SIMILARITY: Belongs to the ligand-gated ionic channel family. larvae stages

Alpha-2 subunit can be combined to beta-2 or beta-4 to give rise to functional receptors.
-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- SIMILARITY: Belongs to the ligand-gated ionic channel family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         POTENTIAL.

                                                                                                                                                                                                                                                                                                                                                                                                           Submitted (OCT-2000) to the EMBL/GenBank/DDBJ databases.

Submitted (OCT-2000) to the EMBL/GenBank/DDBJ databases.

-!- FUNCTION: After binding acetylcholine, the AChR responds by an extensive change in conformation that affects all subunits and leads to opening of an ion-conducting channel across the plasma
                                                                                                                                                                                MEDLINE-197062879; PubMed=8906617; Berckhan K.J., Urrutia A., Ellis S.B., Berckhan K.J., Urrutia A., Ellis S.B., Berckhan K.J., Urrutia A., Ellis S.B., Berckhan K.J., Urrutia A., Ellis S.B., Berckhan K.J., Urrutia A., Harpold M.M.; Camparative structure of human neuronal alpha 2-alpha 7 and beta 2-beta 4 nicotinic acetylcholine receptor subunits and functional beta 4 subunits."; beta 2, alpha 3, alpha 4, alpha 7, beta 2, and beta 4 subunits.";

                                                                            -!- SUBUNIT: Neuronal AChR seems to be composed of two different type
Submitted (MAY-2001) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: After binding acetylcholine, the AChR responds by an extensive change in conformation that affects all subunits and leads to opening of an ion-conducting channel across the plasma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  PÔTENTIAL.
NEURONAL ACETYLCHOLINE RECEPTOR PROTEIN,
                                                                                                                                                                                                                         Note=No experimental confirmation available; SIMILARITY: Belongs to the ligand-gated ionic channel family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ASSOCIATED WITH RECEPTOR ACTIVATION
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         (GLCNAC. . .)
